

# Vene lehised / Siberian Larches

## 19.-20. sajandivahetus / turn of the 20-th century

### **VE NE LEHISED (*LARIX RUSSICA*)**

EESTISSE ON LEHISED SISSE TOODUD. TAVALISEIM LIIK EESTIS ON EUROOPA LEHIS (*LARIX DECIDUA*). ROHKESTI ON KULTIVEERITUD KA VENE LEHIST. RISTTOLMNEMISE TÕTTU ON SIIN PALJU HÜBRIDISEERUNUD LEHISEID. VIHULA MÕISA PARGIS ON NELJA ERINEVAT TÜÜPI LEHISEID. VAATA KA 2.

### **SIBERIAN LARCHES (*LARIX RUSSICA*)**

MANY LARCH TREES HAVE BEEN IMPORTED TO ESTONIA AND THE EUROPEAN LARCH (*LARIX DECIDUA*) IS THE MOST COMMON SPECIES IN THE COUNTRY. THE SIBERIAN LARCH HAS ALSO BEEN MUCH CULTIVATED. BECAUSE OF CROSS-POLLINATION, THERE ARE MANY HYBRID LARCHES HERE. IN VIHULA MANOR PARK, THERE ARE FOUR DIFFERENT TYPES. *SEE ALSO ITEM 2.*
